#### **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 1-8, 13-16 are rejected under 35 U.S.C. 102(e) as being anticipated by Rosen et al (6,487,276).

Consider claims 1-2, 4, 5-6, 8. Rosen teaches a method for determining configuration parameter describing a physical system, comprising measuring an output signal from the system in response to an input signal (col. 3, ln. 61 to col. 4, ln. 54), the output signal being related to the configuration parameters by a linear operator (col. 9, ln. 12 to col. 13, ln. 35; see E and E' equations), and directly re-constructing each of the configuration parameters by applying a prescribed mathematical algorithm to the output signal (col. 9, ln. 12 to col. 13, ln. 35).

Consider claims 3, 7. (col. 9, ln. 13 to col. 12, ln. 43) reads on the limitation of these claims.

Consider claims 13-14, 16. Rosen teaches a method for determining configuration parameter describing a physical system, comprising measuring an output signal from the system in response to an input signal (col. 3, ln. 61 to col. 4, ln. 54), the output signal being related to the configuration parameters by a integral operator (col. 9, ln. 12 to col. 13, ln. 35; see E and E' equations. It is noted that E' is the derivative of E. Derivative is the inversion of the integral or vice versa), and directly re-constructing each of the configuration parameters by applying a prescribed mathematical algorithm to the output signal (col. 9, ln. 12 to col. 13, ln. 35).

Consider claim 15. (col. 9, ln. 13 to col. 12, ln. 43) reads on the limitation of this claim.

### Allowable Subject Matter

3. Claims 9-12 are allowed over the prior art of record.
